Urban Coding and Planning Stephen Marshall 2012-12-06 Urban codes have a profound influence on urban form, affecting the design and placement of buildings, streets and public spaces. Historically, their use has helped create some of our best-loved urban environments, while recent advances in coding have been a growing focus of attention, particularly in Britain and North America. However, the full potential for the role of codes has yet to be realized. In *Urban Coding and Planning*, Stephen Marshall and his contributors investigate the nature and scope of coding; its purposes; the kinds of environments it creates; and, perhaps most importantly, its relationship to urban planning. By bringing together historical and ongoing traditions of coding from around the world – with chapters describing examples from the United Kingdom, France, India, China, Japan, Australia, South Africa, the United States and Latin America – this book provides lessons for today's theory and practice of place-making.

The Art of Classic Planning Nir Haim Buras 2020-01-28 "An accomplished architect and urbanist goes back to the roots of what makes cities attractive and livable, demonstrating how we can restore function and beauty to our urban spaces for the long term. Nearly everything we treasure in the world's most beautiful cities was built over a century ago. Cities like Prague, Paris, and Lisbon draw millions of visitors from around the world because of their exquisite architecture, walkable neighborhoods, and human scale. Yet a great deal of the knowledge and practice behind successful city planning has been abandoned over the last hundred years—not because of traffic, population growth, or other practical hurdles, but because of ill-considered theories emerging from Modernism and reactions to it. The errors of urban design over the last century are too great not to question. The solutions being offered today—sustainability, walkability, smart and green technologies—hint at what has been lost and what may be regained, but they remain piecemeal and superficial. In *The Art of Classic Planning*, architect and planner Nir Haim Buras documents and extends the time-tested and holistic practices that held sway before the reign of Modernism. With hundreds of full-color illustrations and photographs that will captivate architects, planners, administrators, and developers, *The Art of Classic Planning* restores and revitalizes the foundations of urban planning. Inspired by venerable cities like Kyoto, Vienna, and Venice, and by the great successes of L'Enfant's Washington, Haussmann's Paris, and Burnham's Chicago, Buras combines theory and a host of examples to arrive at clear guidelines for best practices in classic planning for today's world. *The Art of Classic Planning* celebrates the enduring principles of urban design and invites us to return to building beautiful cities."

Contemporary Urban Design Thoughts in China Jin Duan 2022-08-09 This book proposes and systematically discusses four trends of thoughts in contemporary Chinese urban design. As the first book to systematically introduce contemporary Chinese urban design thoughts, this book objectively displays the macroscopic picture of contemporary urban design development of China from the time dimension, sorting out seven

historical stages and three disputes. This book is mainly divided into two parts. The first part focuses on the vertical description, taking the major events in the seven historical stages as the context, combing the macro picture of the development of contemporary urban design in China in the last 100 years, and describing the three controversies in this process: contention, subject, and legalization. The second part focuses on horizontal observations, puts forward and systematically discusses the four trends of thought formed in the development of contemporary urban design in China, including "Design of Form," "Synthesis of Design," "Control of Design," and "Design of Rule". This part discusses their development background, theoretical support, and key concepts in detail and finally conducts critical thinking. The whole book is based on historical events, archives, and papers published in Chinese academic journals. While sorting out, summarizing, and objectively discussing, it also makes a critique of urban design activities and academic thinking in China, which will greatly benefit scholars and readers who are interested in urban design history of contemporary China.

Principles of Urban Retail Planning and Development Robert J. Gibbs 2012-01-03 "...Extraordinary: Gibbs has popped the hood and taken apart the engine of commercial design and development, showing us each individual part and explaining fit, form and function." —Yaromir Steiner, Founder, Chief Executive Officer, Steiner + Associates "...the most comprehensive and expansive book ever written on the subject of Retail Real Estate Development. Gibbs is by far the most prominent advocate for reforming retail planning and development in order to return American cities to economic and physical prominence." —Stefanos Polyzoides, Moule & Polyzoides Architects & Urbanists The retail environment has evolved rapidly in the past few decades, with the retailing industry and its placement and design of "brick-and-mortar" locations changing with evolving demographics, shopping behavior, transportation options and a desire in recent years for more unique shopping environments. Written by a leading expert, this is a guide to planning for retail development for urban planners, urban designers and architects. It includes an overview of history of retail design, a look at retail and merchandising trends, and principles for current retail developments. *Principles of Urban Retail Planning and Development* will: Provide insight and techniques necessary for historic downtowns and new urban communities to compete with modern suburban shopping centers. Promote sustainable community building and development by making it more profitable for the shopping center industry to invest in historic cities or to develop walkable urban communities. Includes case studies of recent good examples of retail development

The Sunday Afternoon Watercolor Society John Lund Kriken 2016-11-15 The Sunday Afternoon Watercolor Society (SAWS) was started over 20 years ago in the San Francisco Bay Area by founder John Kriken. John, an prolific architect and professor with UC Berkeley, has archived his paintings since SAWS conception and releases them now in one exclusive art book. *The Sunday Afternoon Watercolor Society: San Francisco Impressions* has over 100 original watercolor pieces from Mr. Kriken, wherein you can also find how to purchase the original pieces outright, and all proceeds go to the Katherine and John Lund Kriken Graduate Student Award at U.C. Berkeley College of Environmental Design.

Redesigning Cities Jonathan Barnett 2017-11-13 This book is recommended reading for planners preparing to take the AICP exam. Too often, no one is happy with new development: Public officials must choose

among unappealing alternatives, developers are frustrated and the public is angry. But growing political support for urban design, developers' interest in community building and successful examples of redesigned cities all over the U.S. are hopeful signs of change. The author explains how design can reshape suburban growth patterns, revitalize older cities, and retrofit metropolitan areas where earlier development decisions went wrong. The author describes in detail specific techniques, materials, and technologies that should be known (but often aren't) to planners, public officials, concerned citizens, and others involved in development.

The Image of the City Kevin Lynch 1964-06-15 The classic work on the evaluation of city form. What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to read this book.

Neighborhood Emily Talen 2018-12-27 The term neighborhood has been reduced to a word for a convenient geographical locator. In fact, most cities claim to be compiled of neighborhoods, but this strays far from the term's original meaning - a spatial unit that people relate to. Neighborhood seeks to dispel this common misconception by integrating a complex historical record and multidisciplinary literature to produce a singular resource for understanding what is meant by neighborhood. Emily Talen provides a multi-dimensional, comprehensive view of what neighborhoods signify how they're idealized and measured, and what their historical progression has been. Talen balances perspectives from sociology, urban history, urban planning, and sustainability among others in efforts to make neighborhoods compatible with 21st century ideals. If neighborhoods are going to play a role in the future of the city, we need to know what and where they are in a more meaningful way. Neighborhoods need to be more than a label and more than a social segregator. For those living in the undefined expanse of contemporary urbanism—which characterizes most of American cities—can the neighborhood come to be more than a shaded area on a map?

Building a traditional Kurdish City Hooshmand Alizadeh 2021-10-08 This book will fill an important gap in the knowledge of Middle Eastern cities by reconstructing the historical process of Sanandaj's formation and development until the rise of modernization in Iran. It discusses the nature of Kurdish settlements and the interaction between the social and spatial forces that have conditioned the processes and patterns of city formation and development over time. It identifies distinctive aspects of Kurdish settlements, such as their extroverted connection with the landscape, and the fluent interplay between private and public realms in

female experience, providing a foundation for further studies of other Kurdish cities in the region. It will be an excellent resource for students and researchers of urban studies, geography, social science, and Kurdish studies.

Study of International Housing 1971 For eleven-year-old Flavia de Luce, an audience with a gypsy fortune-teller at the Bishop's Lacey village fete is just a bit of fun. Until the old woman sees (or claims to see) a vision of Flavia's mother, Harriet, who died on a mountain side in Tibet when Flavia was a baby. 'She is trying to come home,' the old woman intones, chilling them both. With only her faithful bicycle, Gladys, and her precocious powers of deduction to help her, Flavia starts down a dark and twisting road to the truth.

City Building John Lund Kriken 2014 "Good city building is not created by complex statistics, functional problem solving, or any particular decision-making process. Successful cities instead come from people advocating easily understood human values and principles that take into account the sensory, tactile, and sustainable qualities of environment and design in relation to what is the best of human endeavor."--The introduction to City Building. Cities are often viewed as the least-healthy environments for humans because they are centers of pollution, overcrowdedness, and waste. But the opposite can be true. A well-planned city can be a model of sustainable living. Good city building counters the sprawl of suburbia with concentrated land use, replaces globalized design with regionally appropriate building types, and allows for livable, desirable neighborhoods. John Lund Kriken and Philip Enquist, both longtime partners in the preeminent and award-winning planning firm Skidmore, Owings & Merrill (SOM) have collaborated with writer Richard Rapaport to create City Building. This proactive, green-focused, user-friendly guide to city building is organized into three parts: Part one examines the past and defines the current practice of city building, addressing its shortcomings and proposing a comprehensive framework for rethinking the approach to cities in the future. Part two translates this framework into nine best-practice principles that are common to successful, livable, urban environments: sustainability, accessibility, diversity, open space, compatibility, incentives, adaptability, density, and identity. These principles are illustrated in a global portfolio of city building projects, designed by SOM, that show how best practices have been applied successfully. Part three makes the case that, far from being the problem, cities, properly organized, can be a mechanism for sensible, sustainable uses of increasingly scarce resources. The book concludes with a call for a national planning process and a comprehensive framework for settlement.

City Building John Lund Kriken 2010-03-03 Over the past decade, planning books have focused on critiquing & remedying the suburban situation; but as cities revitalize & expand (or suffer and decay), it's important to rethink their direction.

Soft City David Sim 2019-08-20 Imagine waking up to the gentle noises of the city, and moving through your day with complete confidence that you will get where you need to go quickly and efficiently. Soft City is about ease and comfort, where density has a human dimension, adapting to our ever-changing needs, nurturing relationships, and accommodating the pleasures of everyday life. How do we move from the current reality in most cities—separated uses and lengthy commutes in single-occupancy vehicles that drain human, environmental, and community resources—to support a soft city approach? In Soft City David Sim, partner and creative director at Gehl, shows how this is possible, presenting ideas and graphic examples from around the globe. He draws from his vast design experience to make a case for a dense and diverse built environment at a human scale, which he presents through a series of observations of older and newer places, and a range of simple built phenomena, some traditional and some totally new inventions. Sim shows that increasing density is not enough. The soft city must consider the organization and layout of the built environment for more fluid movement and comfort, a diversity of building types, and thoughtful design to ensure a sustainable urban environment and society. Soft City begins with the big ideas of happiness and quality of life, and then shows how they are tied to the way we live. The heart of the book is highly visual and shows the building blocks for neighborhoods: building types and their organization and orientation; how we can get along as we get around a city; and living with the weather. As every citizen deals with the reality of a changing climate, Soft City explores how the built environment can adapt and respond. Soft City offers inspiration, ideas, and guidance for anyone interested in city building. Sim shows how to make any city more

efficient, more livable, and better connected to the environment.

Chinese City and Regional Planning Systems Li Yu 2017-03-02 While the Chinese planning system is vitally important to the rapid development which has been taking place over the past three decades, this is the first text to provide a comprehensive examination and critical evaluation of this system. It sets the current system in historical context and explains the hierarchy of government departments responsible for planning and construction, the different types of plans produced and recent urban planning innovations which have been put into practice. Illustrated with boxed empirical case studies, it shows the problems faced by the planning system in facing the uncertainty in the market economy. In all, it provides readers with a full understanding of a complex and powerful system which is very distinct from other planning systems around the world. As such, it is essential reading for all students interested in the current development taking place in China and, in addition, to planning students with a general interest in planning systems and theory.

The Sustainable City IX N. Marchettini 2014-09-23 Containing the proceedings of the 9th International Conference on Urban Regeneration and Sustainability this book addresses the multi-disciplinary aspects of urban planning; a result of the increasing size of cities; the amount of resources and services required and the complexity of modern society. Most of earth's population now lives in cities and the process of urbanisation still continues generating many problems deriving from the drift of the population towards them. These problems can be resolved by cities becoming efficient habitats, saving resources in a way that improves the quality and standard of living. The process however, faces a number of major challenges, related to reducing pollution, improving main transportation and infrastructure systems. New urban solutions are required to optimise the use of space and energy resources leading to improvements in the environment, i.e. reduction in air, water and soil pollution as well as efficient ways to deal with waste generation. These challenges contribute to the development of social and economic imbalances and require the development of new solutions. Large cities are probably the most complex mechanisms to manage. However, despite such complexity they represent a fertile ground for architects, engineers, city planners, social and political scientists, and other professionals able to conceive new ideas and time them according to technological advances and human requirements. The challenge of planning sustainable cities lies in considering their dynamics, the exchange of energy and matter, and the function and maintenance of ordered structures directly or indirectly, supplied and maintained by natural systems. Topics covered include: Urban strategies; Planning, development and management; Urban conservation and regeneration; The community and the city; Eco-town planning; Landscape planning and design; Environmental management; Sustainable energy and the city; Transportation; Quality of life; Waterfront development; Case studies; Architectural issues; Cultural heritage issues; Intelligent environment and emerging technologies; Planning for risk; Disaster and emergency response; Safety and security; Waste management; Infrastructure and society; Urban metabolism.

Architecture and Planning of Graham, Anderson, Probst and White, 1912-1936 Sally A. Kitt Chappell

1992-06-15 Fascinated by change, architectural historians of the modernist generation generally filled their studies with accounts of new developments and innovations. In her book, Sally A. Kitt Chappell focuses instead on the subtler but more pervasive change that took place in the mainstream of American architecture in the period. Graham, Anderson, Probst and White, one of the leading American firms of the turn of the century, transformed traditional canons and made creative adaptations of standard forms to solve some of the largest architectural problems of their times—in railroad stations, civic monuments, banks, offices, and department stores. Chappell's study shows how this firm exemplified the changing urban hierarchy of the American city in the early twentieth century. Their work emerges here as both an index and a reflection of the changing urban values of the twentieth century. Interpreting buildings as cultural artifacts as well as architectural monuments, Chappell illuminates broader aspects of American history, such as the role of public-private collaboration in city making, the image of women reflected in the specially created feminine world of the department store, the emergence of the idea of an urban group in the heyday of soaringly individual skyscrapers, and the new importance of electricity in the social order. It is Chappell's contention that what people cherish and preserve says more about them than what they discard in favor of the new. Working from this premise, she considers the values conserved by architects under the pressures of

ever changing demands. Her work enlarges the scope of inquiry to include ordinary buildings as well as major monuments, thus offering a view of American architecture of the period at once more intimate and more substantial than any seen until now. Richly illustrated with photographs and plans, this volume also includes handsome details of such first-rate works as the Thirtieth Street Station in Philadelphia, the Cleveland Terminal Group, and the Wrigley Building in Chicago.

Urban Bikeway Design Guide, Second Edition National Association of City Transportation Officials 2014-03-24 NACTO's Urban Bikeway Design Guide quickly emerged as the preeminent resource for designing safe, protected bikeways in cities across the United States. It has been completely re-designed with an even more accessible layout. The Guide offers updated graphic profiles for all of its bicycle facilities, a subsection on bicycle boulevard planning and design, and a survey of materials used for green color in bikeways. The Guide continues to build upon the fast-changing state of the practice at the local level. It responds to and accelerates innovative street design and practice around the nation.

Building Saigon South John Kriken 2017-04-01 In the Saigon South district of Vietnam's Ho Chi Minh City, globally renowned architecture firm Skidmore Owings & Merrill designed a livable, human-scale urban environment in partnership with the Phu My Hung development group. SOM created the master plan that still guides growth and change in this part of the city, which has been accepted as an example of sustainable development to be imitated across Asia and throughout the rest of the world. Saigon South's neighborhoods accommodate residents of varying income levels and provide green public space for all. Verdant parks are placed alongside the area's natural water features. The master plan's emphasis on multi-use design allows for traditional shophouses as well as larger businesses, integrating all parts of life into a pedestrian-friendly district. Saigon South is an economically and civically vibrant district that showcases the city's cultural richness rather than the egos of the architects and developers."

The Death and Life of Great American Cities Jane Jacobs 2016-07-20 Thirty years after its publication, The Death and Life of Great American Cities was described by The New York Times as "perhaps the most influential single work in the history of town planning....[It] can also be seen in a much larger context. It is first of all a work of literature; the descriptions of street life as a kind of ballet and the biting satiric account of traditional planning theory can still be read for pleasure even by those who long ago absorbed and appropriated the book's arguments." Jane Jacobs, an editor and writer on architecture in New York City in the

early sixties, argued that urban diversity and vitality were being destroyed by powerful architects and city planners. Rigorous, sane, and delightfully epigrammatic, Jacobs's small masterpiece is a blueprint for the humanistic management of cities. It is sensible, knowledgeable, readable, indispensable. The author has written a new foreword for this Modern Library edition.

City Rules Emily Talen 2012-06-22 City Rules offers a challenge to students and professionals in urban planning, design, and policy to change the rules of city-building, using regulations to reinvigorate, rather than stifle, our communities. Emily Talen demonstrates that regulations are a primary detriment to the creation of a desirable urban form. While many contemporary codes encourage sprawl and even urban blight, that hasn't always been the case-and it shouldn't be in the future. Talen provides a visually rich history, showing how certain eras used rules to produce beautiful, walkable, and sustainable communities, while others created just the opposite. She makes complex regulations understandable, demystifying city rules like zoning and illustrating how written codes translate into real-world consequences. Most importantly, Talen proposes changes to these rules that will actually enhance communities' freedom to develop unique spaces.

Walkable City Jeff Speck 2012-11-13 Jeff Speck has dedicated his career to determining what makes cities thrive. And he has boiled it down to one key factor: walkability. The very idea of a modern metropolis evokes visions of bustling sidewalks, vital mass transit, and a vibrant, pedestrian-friendly urban core. But in the typical American city, the car is still king, and downtown is a place that's easy to drive to but often not worth arriving at. Making walkability happen is relatively easy and cheap; seeing exactly what needs to be done is the trick. In this essential new book, Speck reveals the invisible workings of the city, how simple decisions have cascading effects, and how we can all make the right choices for our communities. Bursting with sharp observations and real-world examples, giving key insight into what urban planners actually do and how places can and do change, Walkable City lays out a practical, necessary, and eminently achievable vision of how to make our normal American cities great again.

Islamic Urban Studies Masashi Haneda 2013-10-28 The term 'Islamic cities' has been used to refer to cities of the Islamic world, centring on the Middle East. Academic scholarship has tended to link the cities of the Islamic world with Islam as a religion and culture, in an attempt to understand them as a whole in a unified and homogenous way. Examining studies (books, articles, maps, bibliographies) of cities which existed in the Middle East and Central Asia in the period from the rise of Islam to the beginning of the 20th century, this book seeks to examine and compare Islamic cities in their diversity of climate, landscape, population and historical background. Coordinating research undertaken since the nineteenth century, and comparing the historiography of the Maghrib, Mashriq, Turkey, Iran and Central Asia, Islamic Urbanism provides a fresh perspective on issues that have exercised academic concern in urban studies and highlights avenues for future research.

Space and Muslim Urban Life Simon O'Meara 2007-08-09 This book develops academic understanding of Muslim urban space by pursuing the structural logic of the premodern Arab-Muslim city, or medina. With particular reference to The Book of Walls, an historical discourse of Islamic law whose primary subject is the wall, the book determines the meaning of a wall and then uses it to analyze the space of Fez. One of a growing number of studies to address space as a category of critical analysis, the book makes the following contributions to scholarship. Methodologically, it breaks with the tradition of viewing Islamic architecture as a well-defined object observed by a specialist at an aesthetically directed distance; rather, it inhabits the logic of this architecture by rethinking it discursively from within the culture that produced it. Hermeneutically, it sheds new light on one of North Africa's oldest medinas, and thereby illuminates a type of environment still common to much of the Arab-Muslim world. Empirically, it brings to the attention of mainstream scholarship a legal discourse and aesthetic that contributed to the form and longevity of this type of environment; and it exposes a preoccupation with walls and other limits in premodern urban Arab-Muslim culture, and a mythical

paradigm informing the foundation narratives of a number of historic medinas. Presenting a fresh perspective for the understanding of Muslim urban society and thought, this innovative study will be of interest to students and researchers of Islamic studies, architecture and sociology.

Sustainable Development and Planning IX C.A. Brebbia 2017-10-11 Containing papers presented at the 9th International Conference on Sustainable Development and Planning this volume brings together the work of academics, policy makers, practitioners and other international stakeholders and discusses new academic findings and their application in planning and development strategies, assessment tools and decision making processes. Problems related to development and planning are present in all areas and regions of the world. Accelerated urbanisation has resulted in both the deterioration of the environment and quality of life. Taking into consideration the interaction between different regions and developing new methodologies for monitoring, planning and implementation, new strategies can offer solutions mitigating environmental pollution and non-sustainable use of available resources. Energy saving and eco-friendly buildings have become an important part of modern day progress with emphasis on resource optimisation. Planning is a key part in ensuring that these solutions along with new materials and processes are efficiently incorporated. Planners, environmentalists, architects, engineers and economists have to work collectively to ensure that present and future needs are met. The papers in the book cover a number of topics, including: City planning; Regional planning; Rural developments; Sustainability and the built environment; Sustainability supply chain; Resilience; Environmental management; Energy resources; Cultural heritage; Quality of life; Sustainable solutions in emerging countries; Sustainable tourism; Learning from nature; Transportation; Social and political issues; Community planning; UN Sustainable Development Goals and Timber Structures.

Planning Middle Eastern Cities Yasser Elsheshtawy 2004-08-02 Middle Eastern cities cannot be lumped together as a single group. Rather they make up the urban kaleidoscope of the title, as the diversity of the six cities included here shows. They range from cities rich in tradition (Cairo, Tunis, and Baghdad), to neglected cities (Algiers and Sana'a), to newly emerging 'oil-rich' Gulf cities (Dubai). The authors are all young Arab scholars and architects local to the cities they describe, providing an authentic voice with an understanding no outsider could achieve. These contributors move away from an exclusively 'Islamic' reading of Arab cities - which they regard as outdated and counterproductive. Instead, they explore issues of identity and globalization in the context of the struggles and solutions offered by each city from the late nineteenth century to the present day. Their focus is on how the built environment has changed over time and under different influences.

Arabic-Islamic Cities Besim S. Hakim 2008 This is a pioneering study of how traditional towns and cities were conceived, organized, and developed over long periods of time following simple rules that were based on religious and ethical values. Sources were used that date back to the fourteenth century and earlier. Although the study is embedded in the Arab-Islamic culture of North Africa and the Middle East, its implications are universal particularly in light of scientific discoveries of natural processes and the underlying principles of complexity theory and the processes that bring about emergence. Generative processes that shaped urban form are clearly demonstrated in the book. The study also sheds light on the implications of responsibility allocation to the various parties who are involved in the development process and the resulting patterns of decision-making that affect change and growth in the built environment. All of these issues are of significance when trying to understand the concepts that relate to various aspects of sustainability, the future potential of eco-cities, and the nature of policies and programs that are required for the immediate present and for the future. This work is a major contribution for enhancing the theories and practice of urban planning and design.

Eco-Urbanity Darko Radovic 2013-12-19 There is need for change in our currently unsustainable cities.

Carefully outlining paths towards better, sustainable ways of urban living, this book proposes a radical change in the ways we conceive and live our urban environments. Bringing together diverse cultural and disciplinary views on urban sustainability, eighteen leading academics and practitioners in sustainable architecture and urbanism explore global concerns of sustainability and urbanity. This broad range of issues are clearly articulated and linked to concrete places and projects, merging research and cutting-edge design

investigations to promote environmentally and culturally sensitive urban futures.
