Panther vs Sherman Steven J. Zaloga 2011-03-15 In this book Steven J Zaloga offers a fascinating comparison between the two most important tanks involved in the crucial fighting of 1944, the American Sherman and the German Panther. Placing the reader in the heart of this battle between quality and quantity Zaloga uses a compelling account of the ferocious fighting during the Battle of the Bulge to explain the successes and failures of each tank, highlighting the fact that a tank can only be as good as its crew, weighing up the impact of low morale, high cost and mediocre crew training on the Panther's superiority. With full-colour battlescenes, technical drawings, photographs, digital gunsight views,

extracts from crew training manuals and real combat reports, this book brings the titanic battles between the Panther and Sherman to life.

*M3 Medium Tank vs Panzer III* Gordon L. Rottman 2013-02-20 This was a duel between the stalwart of the Wehrmacht armored divisions the Panzerkampfwagen III and the American's as yet untested M3 Grant.

In reality both would prove unequal to the task as they floundered amidst the rugged hills and ravines of the Tunisian landscape. This book charts the design and development of these two disparate rivals their vastly different armament and armor as well as their tactical concepts. Analysing the strengths and weaknesses of these two opponents, this book explores the successes and failures of the Grant and Panzer III as they clashed at the critical battles of North Africa. Moreover it is an insight into the lives of the tank crews themselves as they struggled with the twin horrors of tank warfare and the fight for survival amidst some of the most inhospitable terrain on earth.

**Japanese Tanks 1939-45** Steven J. Zaloga 2011-12-20 The Japanese Army used tanks to great effect in the build-up to World War II. Inspired by European designs, in the 1920s and 1930s an innovative Japanese tank program facilitated their campaigns in China prior to the Pacific War. During the ensuing war against the

Allies tanks were deployed imaginatively in jungle terrain previously thought impassable by such vehicles, being integral in Malaya and the capture of Singapore. Steven J Zaloga uses detailed and colorful artwork and photographs to explore these designs, explaining their neglect in favor of the naval priorities that left Japanese tanks outmoded by Western designs.

**Abraham Lincoln: A Giant Among Presidents (Townsend Library)** Tanya Savory 2010 "Abraham Lincoln grew up with little more than a second-grade education. His father thought school was a waste of time and wanted young Abe to learn carpentry and farming instead. Even so, Lincoln developed a love of reading so great that he would often walk five miles just to borrow a book. In time, his reading would help to shape a sharp mind, a keen sense of humor, and a kind heart. Lincoln carried these qualities with him from a dirt-floor cabin in Kentucky all the way to the White House. As President, he would fight to keep our country from breaking apart, and he would ultimately free 4,000,000 slaves. However, there would be a price to pay for these triumphs--a very high price, indeed." --Publisher

**Armored Thunderbolt** Steven Zaloga 2025-08 Hundreds of photos, including many never published before with riveting accounts of armored warfare in World War II. Compares the Sherman to other tanks, including the Panther and Tiger. Author is a world-renowned expert on the Sherman tank and American armor.

**Forgotten Tanks and Guns of the 1920s, 1930s and 1940s** David Lister 2018-10-30 History forgets. Files are lost and mislaid. But this book seeks to shine a light, offering a collection of cutting edge pieces of historical research detailing some of the most fascinating arms and armament projects from the 1920s to the end of the 1940s, nearly all of which had previously been lost to history. Included here are records from the UKs MI10 (the forerunner of GCHQ) which tell the story of the mighty Japanese heavy tanks and their service during the Second World War.

Other chapters expand on the development of British armour, including the story of infantry tanks from the 1920s right through to the end of the Second World War and beyond. Other items placed beneath the microscope in this fascinating history include a wide variety of guns, rocket launchers, super heavy tanks and countless pieces of specialised armour. Previously overlooked, hidden under layers of dust in archives up and down the country, the histories of these objects has finally been uncovered. *Bazooka vs Panzer* Steven J. Zaloga 2016-11-17 World War II saw tanks assume a dominant role in warfare, capable of tearing through the enemy lines if left unchecked. To combat the threat posed by these armoured behemoths the United States developed the M1 Anti-Tank Rocket Launcher, better known as the Bazooka. First employed in combat during 1942, the weapon required a great deal of skill and courage to use effectively. By late 1944 it was a mainstay of the US infantry's anti-tank capabilities, alongside towed weapons, anti-tank grenades and other longer-established measures. Focusing on the savage close-quarters fighting between Germany's armoured divisions and the US infantry during the Battle of the Bulge, Steven Zaloga's absorbing study compares and assesses the strengths and limitations of the cutting-edge technology used by both sides. Featuring specially commissioned full-colour artwork and explosive battle reports, this volume casts new light on the evolving nature of infantry-versus-tank combat in the closing months of World War II.

World War II Japanese Tank Tactics Gordon L. Rottman 2011-03-15 In this book, expert author and tactician Gordon L Rottman provides the first English-language study of Japanese Army and Navy tank units, their tactics and how they were deployed in action. The Japanese army made extensive use of its tanks in the campaigns in China in the 1930s, and it was in these early successes that the Japanese began to develop their own unique style of tank tactics. From the steam-rolling success of the Japanese as they invaded Manchuria until the eventual Japanese defeat, Rottman provides a battle history of the Japanese tank units as they faced the Chinese, the Russians, the British and the Americans.

M60 vs T-62 Lon Nordeen 2013-05-20 Designed for the battlefields of Europe at the height of the Cold War, the M60 and T-62 were the premier combat tanks of their day. However, it was in the deserts of the Middle East that they finally met in battle. This new Duel title examines the design and development of these main battle tanks, identifying their strengths and weaknesses, and describing and analyzing their performance on the battlefield during the Yom Kippur War, the Iran-Iraq War, and the first Gulf War.

The German Army in World War I (3) Nigel Thomas 2012-03-20 This third volume of a mini-series covering the German forces in World War I examines

the troops that fought during the climax of the war on all fronts: the last great battles of attrition in the West (Arras, Messines, 3rd Ypres Passchendaele/Langemarck and Cambrai, 1917) and the collapse of Russia in the East. The 'Kaiserschlacht' campaign is covered, as are the German operations in Italy, the Balkans, and in support of Turkey in the Middle East. Uniform changes during this period reflected the introduction of new tactics and weapons and new types of troops, such as tanks and assault battalions.

Bf 110 vs Lancaster Robert Forczyk 2013-06-20 The RAF introduced the Avro Lancaster in 1942 and used it to spearhead this aerial offensive. In response, the Luftwaffe created an elite nightfighter force based primarily upon the Bf 110. The Luftwaffe was quick to equip it with airborne radar that allowed it to intercept and destroy Lancasters over Germany. In turn, the RAF adopted countermeasures such as the Monica rearward-looking radar to alert Lancaster crews to the approach of nightfighters. In May 1943 the Luftwaffe suddenly developed a novel technical and tactical approach to attacking RAF bombers. The new tactic proved amazingly successful, and British bombers could be attacked from below with no warning. For its part, the RAF failed to detect the new German tactic for six crucial months, during which time its Lancaster bombers were almost defenceless against this new threat. In time, however, the German advantage of surprise was lost and the RAF developed countermeasures to deal with the new threat. The duel between upgraded Bf 110s and Lancasters in the night skies over Germany became increasingly dominated by cutting-edge technology, which would determine the efficacy of strategic bombing.

**U-boats vs Destroyer Escorts** Gordon Williamson 2013-08-20 Winston Churchill claimed the 'U-boat peril' was the only thing that frightened him during World War II. The U-boat was developed from a small coastal vessel into a state-of-the-art killer, stalking the high seas

picking off merchant convoys, until the introduction of the destroyer escort, and the development of dedicated anti-submarine tactics provided a means of defence and attack against the U-boats. Gordon Williamson describes the design and development of these two deadly opponents, their tactics, strengths and weaknesses, weaponry and training. He provides an insight into the lives of the Royal Navy and Wolf Pack crews as they played their deadly games of cat and mouse on the high seas, gambling with their lives and the fate of the nations.

*M4 Sherman vs Type 97 Chi-Ha* Steven J. Zaloga 2012-05-20 Although US and Japanese tank forces first clashed in 1941, it was on in 1944 that tank-vs-tank action became more common as both sides poured larger numbers of tanks into the combat zone. These battles were a means of demonstrating each side's latest tank technology. For the US, the pinnacle of their tank machinery came in the form of the M4 Sherman and for the Japanese, their most notable feat of engineering was the smaller, yet still effective Type 97 Chi-Ha. The last two campaigns of the war - Iwo Jima and Okinawa - saw tanks used by both sides, the Japanese finally concluding that "the fight against the US Army is a fight against his M4 tanks". The illustrations follow the usual Duel pattern with profile illustrations of the Type 97-kai Shinhoto Chi-ha and the M4A3, views showing the ammunition of both types, interior illustrations showing the turret layout in both types, and a battlescene showing the Type 97-kai in combat against US armour.

#### Modelling the US Army M4 (75mm)

*Sherman Medium Tank* Steven J. Zaloga 2012-04-20 The Sherman was the most widely used Allied tank of World War II and was built in larger numbers than all German tanks combined. There was also a huge number of variants, powered by different engines, and manufactured with different types of hulls and turrets. This book presents an expert guide to modelling the 75mm gun versions used by the US Army in the ETO, in 1/35 and 1/48 scale. The projects featured include an early

M4A1 from Operation Husky (July 1943), an intermediate M4 during Operation Cobra (August 1944), an M4 mine-roller in the Ardennes (January 1945), and a M4A3 during Operation Grenade (February 1945).

*King Tiger vs IS-2* David R. Higgins 2011-09-20 This book examines the technology and strategy that defined the outcome of the battles between the King Tiger and the IS-2. The Soviets had been quick to develop tanks that could fight the Tiger on an equal footing, but these were developed as part of a completely different strategy than that employed by the Germans. The King Tiger was a modern marvel, and remained unmatched in one-on-one combat. Technologically superior, with greater firepower and better armour than the Soviet IS-2, the King Tiger was a formidable opponent. However, the IS-2 was lighter, more manoeuvrable and most importantly, far more numerous. With overwhelming numerical superiority the Soviets were able to simply overwhelm their opponents, negating the technical superiority of the King Tiger

#### **Dirty Little Secrets of World War II**

James F. Dunnigan 1996-03-14 *Dirty Little Secrets of World War II* exposes the dark, irreverent, misunderstood, and often tragicomic aspects of military operations during World War II, many of them virtually unknown even to military buffs. Like its successful predecessor, *Dirty Little Secrets*, Dunnigan and Nofi's new book vividly brings to life all theaters and participants of the war. Revelations include: - The real death count for the war, and why it has never been previously released. - The "new age" general who refused to smoke or drink, who lived on a vitamin-enriched diet, who opposed animal experimentation, and who regularly consulted his astrologer. - How equipment developed for the war led to such modern high-tech innovations as "smart bombs," electronic warfare, and nuclear missiles. - The lackadaisical relationship between Germany and Japan throughout the war. - Tricky bits of information about the lingering effects of the war -- like

the thousands of live shells and mines that are still buried in Europe and off the East Coast of America.

*Bolt Action: Empires in Flames* Warlord Games 2015-10-20 Far from the battlefields of Europe and North Africa, Allied forces fought a very different war against another foe, from the jungles of Burma to the islands of the Pacific and the shores of Australia. This new Theatre Book for Bolt Action allows players to command the spearhead of the lightning Japanese conquests in the East or to fight tooth and nail as Chindits, US Marines and other Allied troops to halt the advance and drive them back. Scenarios, special rules and new units give players everything they need to recreate the ferocious battles and campaigns of the Far East, from Guadalcanal to Okinawa, Singapore, the Philippines, Iwo Jima and beyond.

**The Los Banos Prison Camp Raid** Gordon L. Rottman 2011-10-20 On the southwest shore of Laguna de Bay in the Philippines stood the Los Banos Internment Camp. Held within were 2,147 starving POWs, surrounded by thousands of Japanese troops. As the desperate battle for Manila raged, only 130 Paratroopers could be spared for the rescue operation. Supported by Alamo Scouts, local guerrillas, and amphibious tractors, they seized the element of surprise, and rescued the POWs. It was a stunning triumph of courage and perfect timing in the face of overwhelming odds.

*T-34-85 vs M26 Pershing* Steven J. Zaloga 2011-12-20 A hotly-debated topic amongst tank buffs is of the relative merits of the Soviet and American tanks of World War II. Using recently revealed documents, Steven Zaloga sheds light on the crucial tank battles of the Korean War as the rival superpowers' finest tanks battled for supremacy. The Soviet-equipped North Korean Peoples Army initially dominated the battlefield with the seemingly unstoppable T34-85. As US tank battalions hastily arrived throughout the late summer and early autumn of 1950, the M26 Pershing took the fight to North Korea with increasing success.

**M10 Tank Destroyer vs StuG III**

**Assault Gun** Steven J. Zaloga 2013-08-20 The Allies' M10 Tank Destroyer and the Germans' Sturmgeschütz (StuG) 111 were the unsung workhorses of the northwest European battlefields of 1944-45. While their mission was not principally fighting one another, their widespread use ensured their frequent encounters, from the Normandy Bocage, to the rubble-strewn streets of Aachen. The StuG 111 was the quintessential assault gun, a low-slung, heavily armoured, turretless vehicle intended to provide direct fire support for infantry formations, whilst the M10 3in Gun Motor Carriage was originally developed as a tank destroyer. However, by 1944 the 3in gun proved ineffectual against the most thickly armored German tanks, and was consequently relegated to infantry support too. Widely deployed in roles their designers had not envisaged, these two armoured fighting vehicles clashed repeatedly during the 11-month campaign, which saw the Allies advance from Normandy to the heart of the Reich. Fully illustrated with specially commissioned artwork, this is the story of their confrontation at the height of World War II.

**Japanese Paratroop Forces of World War II** Gordon L. Rottman 2012-09-20 For the first time in English, this book offers a concise but fact-packed account of the organization, equipment, and all operations of Japan's small but elite wartime parachute forces. Correcting and amplifying previous accounts based on wartime intelligence, it traces the Imperial Army's Raiding Regiments and the Imperial Navy's parachute-trained Yokosuka 1st & 3rd Special Naval Landing Forces from the first trials units, through their successful assaults in early 1942, to the last desperate battles and raids of 1944-45. The text is illustrated with rare photographs, and meticulously reconstructed color artwork of the men and their gear.

**Normandy 1944** Niklas Zetterling 2019-12-19 A revised and updated single-source reference book accurately detailing the German field forces employed in Normandy in 1944

and their losses. In this book, military historian Dr. Niklas Zetterling provides a sobering analysis of the subject matter and debunks a number of popular myths concerning the Normandy campaign—the effectiveness of Allied air power; the preferential treatment of Waffen-SS formations in comparison to their army counterparts; etc. He supports his text with exhaustive footnoting and provides an organizational chart for most of the formations covered in the book. Also included are numerous organizational diagrams, charts, tables, and graphs. “A valuable reference for anyone seriously interested in the battle for Normandy.” –The NYMAS Review

#### **M4 (76mm) Sherman Medium Tank 1943–65**

Steven J. Zaloga 2013-08-20 The M4 Sherman tank was the mainstay of the Western allies between 1942 and 1945. Fast and modern it was a big success and was transported as far afield as Russia and North Africa. The American Chief of Staff claimed in November 1943 it was 'hailed widely as the best tank on the battlefield today...'. However, by the Normandy invasion of June 1944 this was not the case: the new German heavy tanks such as the Panther and Tiger were completely outclassing the Sherman. This title covers the M4 version armed with the 76 mm gun, examining developments such as the HVSS suspension, using much new archive material.

**LVT(4) Amtrac** David Doyle 2020-08-28 Originally developed as a swamp rescue vehicle by millionaire philanthropists Donald and John Roebling, the LVT (Landing Vehicle, Tracked), or "Alligator," was widely used in the Allied island-hopping campaign in the Pacific during World War II. Powered by a mammoth aircraft-type engine, the LVT(4) could cross treacherous coral reefs, deep water, and swamps to land troops ashore. The LVT(4) also introduced the rear ramp, which when lowered allowed troops to rush out, rather than clamber over the tall sides as on previous models. Produced by Food Machinery Corporation (FMC), railway equipment manufacturer St. Louis Car Company, and automobile maker Graham-Paige, over 8,000 LVT(4)s were built during the war; today only a few remain. Through dozens of archival photos as well as detailed photographs of some of the finest existent examples of these vehicles, this iconic landing vehicle is explored, and its history is explained.

**M4 Sherman vs Type 97 Chi-Ha** Steven J. Zaloga 2012-05-22 While the Pacific campaign is not well known as a theater for tank combat, the US Army deployed nearly a third of its tank battalions to the Pacific, and Japan was among the top five tank manufacturers during the war. The obscurity of Pacific tank battles largely hinged on the tactics used in the Pacific theater due to terrain. Tanks were generally used as infantry support weapons, and the terrain precluded the use of tanks in maneuver warfare that might have led to large scale tank-vs.-tank battles. This book begins by surveying the early tank battles in the Pacific between US and Japanese forces, starting with the first encounters in the Philippines in 1941 between US M3 Stuart light tanks and Japanese Type 95 tanks. Tank-vs.-tank action became more common in 1944 as both sides poured larger numbers of tanks into the combat zone. The largest Japanese tank attack of war took place in July 1944 on Saipan, but there were frequent tank encounters in the ensuing months on Guam, and Peleliu. The Philippines saw the largest Japanese tank deployment of the war, with the Japanese sending a tank division to Luzon in 1944. This led to extensive clashes with US army forces, sometimes pitting tank vs. tank, but often a mixture of tanks, infantry anti-tank weapons, and even self-propelled guns. The last two campaigns of the war on Iwo Jima and Okinawa saw tank use on the part of both sides, the Japanese finally concluding that "the fight against the US Army is a fight against his M4 tanks". This book will take a look at the two best tanks of the Pacific campaign. On the American side, the M4A3 Sherman medium tank was used by both the US Army and US Marine Corps. On the Japanese side, the Type 97-kai Shinhoto Chi-Ha was the best tank to see combat. This was a very uneven contest, which is the main reason that in 1944 on Luzon, the Japanese were so reluctant to deploy the Chi-

ha against the Sherman and preferred to use them as dug-in pillboxes. The book illustrations will follow the usual Duel pattern with profile illustrations of the Type 97-kai Shinhoto Chi-ha and M4A3, views showing the ammunition of both types, interior illustrations showing the turret layout in both types, and a Battlescene showing the Type 97-kai in combat against US armor.

**USMC M4A2 Sherman vs Japanese Type 95 Ha-Go** Romain Cansière 2021-02-18 The different national tank doctrines of the United States and Imperial Japan resulted in a terrible mismatch of the predominant tank types in the crucial Central Pacific campaign. A flawed Japanese doctrine emphasized light infantry support tanks, often used in small numbers. Tactically, tanks were often frittered away in armored versions of the familiar banzai attacks. Meanwhile, the Americans saw the tank as an infantry support weapon, but developed a more systematic tactical doctrine. They settled upon a larger medium tank - in the case of most Marine Corps tank battalions, the diesel-powered M4A2 (unwanted by the US Army). This superbly detailed title reveals how both the two sides' tactical and technical differences in the approach to armored warfare soon became apparent over a series of deadly engagements, from the first tank fight at the battle of Tarawa in November 1943, through to engagements on Parry Island, Saipan, and Guam, before ending with Peleliu in September 1944.

The Panzer III Bob Carruthers 2013-05-17 The Panzer III was designed to be the backbone of the Panzer force and was deployed on every front. However, due to its deficient armament and poor armour, and despite its outstanding reliability, it was obsolete by 1942.??This comprehensive overview of the Panzer III in action was compiled by Emmy Award winning historian Bob Carruthers. It draws heavily on war-time intelligence reports to produce a fascinating insight into the development and combat history of the Panzer III at the tactical and operational level.??Also featured are

rare developments such as the flame thrower variant alongside unpublished photographs and illustrations which provide an absorbing study, from an array of primary sources, of the world of the Panzer III and its crews, which conveys to the modern reader a vivid sense of how they were viewed at the time.

*Underwater Archaeology of a Pacific Battlefield* Jennifer F. McKinnon 2015-08-07 Battlefields have been the object of fascination for millions of tourists and the subjects of elaborate interpretation projects. This volume will outline the process and results of developing the WWII Maritime Heritage Trail: Battle of Saipan Project. This book will provide examples of how a group of archaeologists, managers and a community took a specific battle and transformed it from a collection of unknown archaeological sites into a comprehensive storied battlescape that reflects the individuals and

actions of those who were involved. It will provide an in-depth view of current maritime archaeological research on submerged battlefield sites, the development of a WWII battlefield maritime heritage trail, as well as the problems and solutions of such an effort. It will cover subjects such as: -heritage and dark tourism-conflict or battlefield archaeology-public interpretation, and community engagement. This volume will serve as a practical review of a project influenced by a range of complementary areas of study and inclusive of many stakeholders, from the public to the professional and beyond. It provides an example of a balanced approach towards research and interpreting archaeological sites through the identification and inclusion of the various stakeholders (professional and community) and an awareness of what was being included, ignored, or inadequately represented in the research and interpretation.

**Bolt Action: Armies of Imperial Japan** Warlord Games 2013-07-20 Following the assault on Pearl Harbor, the Imperial Japanese military saw action across Asia, from the capture and defence of the islands of the Pacific to the occupation of territory in China and Burma. Panzer IV vs Char B1 bis Steven J. Zaloga 2011-12-20 The Battle of France in 1940 involved the first large-scale tank-against-tank battles in history. The massive clashes at Stonne, Hannant, and Gembloux involved hundreds of tanks on both sides, yet have faded from memory due to the enormity of the French defeat. This book examines two of the premier opposing tanks of the Wehrmacht and the French Army, the German PzKpfw IV and the French Char B1 bis. With a complete history of the design, development, and deployment of these armoured fighting vehicles, the story of these great battles is once again brought to life.

### **Marine Tank Battles In The Pacific**

Oscar E. Gilbert 2007-10-09 No previous book has been devoted to Marine Corps armor in World War II. Gilbert's gripping narrative combines exhaustive detail on Marine armor and combat with moving eyewitness accounts, never before published, of what it was actually like to be a Marine tanker in action in the Pacific.
